

High Angle Reflex Mount (H.A.R.M.™)

With DeltaPoint® Pro NV

Leupold's robust High Angle Reflex Mount system enables infantry to launch any grenade with pinpoint accuracy. Tailored to the most popular grenade launchers in the industry and adaptable to a multitude of munitions, the H.A.R.M.™ provides an accurate, effective, and low-cost solution for long-range projectile precision. Mounted alongside the DeltaPoint® Pro NV, the H.A.R.M. system utilizes modern night vision equipment for reliable day and night operation.

KEY BENEFITS

H.A.R.M.

Intuitive Elevation Adjustments

Tactile elevation dials easily adjust for distance and allow rapid target engagement at long ranges.

Interchangeable Dual Ballistic Cams

Quickly toggle between two different ammunition selections on a single ballistic cam. The interchangeable dual ballistic cams can be swapped out by hand, making adjustments in the field fast and easy.

Compact Design

A 12-o'clock mounting position mitigates snag hazards and maintains a low-profile that's ideal for field use.

Eliminate Cant Error

A rear compensation level indicates cant and allows operators to compensate for spin drift at longer ranges.

Simplified Design

Variations of the H.A.R.M. enable popular grenade launchers, like the M203 and the M320, to switch configuration without sacrificing point-of-aim.

Low-Cost Alternative to Computerized Systems

Computer-based systems experience backlash in their gears, but the H.A.R.M. doesn't use gears, providing infantry with a more effective and affordable sighting solution.

DELTAPOINT PRO NV

See more in less light with Professional-Grade Red Dot Optical System

- True-to-life color consistency
- Premium edge-to-edge lens clarity

Enhanced Night Vision Compatibility

The new DP Pro NV is compatible with white phosphor and provides 10 brightness settings so shooters can fine tune their red dot to match the sensitivity of their equipment.

Superior ruggedness is verified through Leupold's Punisher testing process.

KEY FEATURES

DELTAPOINT PRO NV

- Professional-Grade Red Dot Optical System
- Motion Sensor Technology (MST)
- 1 MOA slotted click adjustment
- Compact design
- Push-button on/off
- Lightweight aluminum housing
- 10 brightness settings
- Waterproof to 33 ft
- Enhanced night vision compatibility
- Fogproof
- Tool-less quick-change battery compartment
